Mission Statement

Our Mission

To help our clients make quantified, informed, substantial improvements in their drilling efficiency, hydrocarbon detection and reservoir characterization.

To constantly build a leading edge service company that attracts, develops and retains exceptional people.

To respect and improve the highest safety and environmental standards whilst actively participating in the development and know-how of the countries in which we operate.

Company Overview

Geolog International (GEOLOG) is a world leader in oilfield services delivering solutions and expertise to National, International and Independent Oil, Gas and Geothermal operators globally. Since its founding in Milan, Italy, in 1982, GEOLOG has developed effective and cost-effective alternative solutions to complex and expensive downhole measurement tools. Through the optimisation of formation, fluid and reservoir analysis, well construction is improved, well delivery optimised and production delivery accelerated. By utilising these in or near realtime rigsite applications, operators are able to mitigate risk and reduce cost. As part of its strategy to become the global supplier of choice, GEOLOG has gained experience in over 70 countries worldwide, performing services and assisting operators onshore and offshore, during exploration, development and appraisal programs in shallow to ultra-deep water, HP/HT, unconventional oil and gas and geothermal wells.

GEOLOG maintains a committed focus on research and development, innovation and the implementation of proprietary technologies through continual investment in novel solutions to industry challenges. This robust commitment to continuous research and development has enabled GEOLOG to develop and deploy an extensive suite of wellsite Drilling and Formation Evaluation solutions. GEOLOG holds a significant number of patents, and targets the introduction of new patents annually. In parallel to delivering technical excellence, GEOLOG strongly prioritises its HS&E commitments, recently marking four years without a Lost Time Incident, while continuing to implement and refine its internationally recognized QHSE and CSR standards. In addition to being the global market leader in hydrocarbon evaluation at wellsite through its extraction, analysis and interpretation of gasses from drilling fluids, GEOLOG also provides a uniquely comprehensive, proven and market leading suite of drilling and formation evaluation solutions. Together, these technologies have the primary goal of reducing drilling time and costs, improving operational safety and greatly enhancing the understanding of formations and reservoirs during drilling. More recently, through its Milan-based Laboratory and R&D company GeoTech, GEOLOG has developed geochemical focused laboratory services for reservoir characterisation aimed at oil and gas production optimisation in both pre and post drilling phases, enabling a fully integrated approach to reservoir evaluation and understanding. Thanks to its independence and provision of surface solutions, GEOLOG has become a trusted advisor for operators looking at ways to reduce their expensive downhole measurements and optimise drilling programs.
GEOLOG was founded in Italy in 1982 to provide mud logging services to AGIP on geothermal, oil and gas wells. From its early years, GEOLOG’s strong technological and R&D culture led to the development of a number of innovative solutions and highly technological patents in the mud logging arena. The Italian crisis of 1994, during which the company moved abroad, opening bases in Tunisia, Congo and Venezuela, servicing AGIP’s international operations, acted as a catalyst for the company’s international expansion. Current management acquired the company in 2001 and has been able to develop its innovative solutions and technological patents into commercial products and services, thereby significantly growing the customer base across not only international oil companies but also across national oil companies worldwide. Whilst retaining its R&D and production facilities in Milan, Italy, in 2016 the company reorganized its corporate structure under GEOLOG Surface Logging DMCC, based in Dubai, UAE.

Under current management, GEOLOG has consistently grown organically by delivering value, expanding its operations from its established footholds in Europe, North and West Africa and Central America and by opening new bases in the Middle and Far East, South America, the North Sea, USA and Australasia. Today, GEOLOG remains privately owned and has grown to become one of the largest international independent surface companies in the world offering a full spectrum of services from Surface Logging to Drilling Solutions, as well as Laboratory studies and R&D partnerships.

GEOLOG’s experience covers over 8,000 wells globally and includes national and international oil companies across multiple continents. Our services are in demand with traditional oil & gas operators and extend to small and large integrated service providers.

Our services have been performed both onshore and offshore for:

- Exploration Wells
- Development Wells
- Geothermal Wells
- Unconventional Reservoirs
- Extended Reach Drilling
- Narrow Mud Weight Windows
- Underbalanced Managed Pressure Drilling

GEOLOG has logged over 500 wells in Deep and Ultra-Deep Water operations in:

- Angola
- Australia
- Brazil
- Congo
- Egypt
- Ghana
- Gulf of Mexico
- Guyana
- India
- Italy
- Malaysia
- Mauritania
- Mozambique
- Namibia
- Sri Lanka
- Tanzania
- Timor Leste
- Togo
- Trinidad
- Tunisia
- Turkey
- Venezuela

HP/HT Well Experience includes:

- Argentina
- Austria
- Bolivia
- Brazil
- China
- Ghana
- India
- Italy
- Kurdistan
- Kuwait
- Mexico
- Mozambique
- Netherlands
- Norway
- Romania
- Sri Lanka
- Turkey

Innovation in Surface Logging & Drilling Services

Thanks to its strong commitment to innovation and constant improvement of its services, GEOLOG continuously conducts R&D projects in partnership with its clients. GEOLOG stands today as a leader in advanced surface logging technologies with unique solutions dedicated to drilling optimization and advanced rock and fluid characterization.

GEOLOG’s R&D collaboration with its clients often starts at the early stage of conceptual design and follows through into the field deployment and solution validation. This is to ensure that the research work is entirely focused on meeting the client expectations and solving the challenges arising continuously in our oilfield industry.

The following is a list of some of the technical papers GEOLOG has written in collaboration with its clients over recent years:

  - Joint paper prepared with Repsol shows how an accurate Mud Flow Measurement is able to identify and evaluate in real time an open fracture while drilling. The paper summarizes that monitoring while drilling of micro-losses associated to fractures provides important data to characterize fractured reservoirs, to identify pay zones and to support testing decisions.

- **The Application of Mud Gas Analysis in the Evaluation of a Complex Carbonate Reservoir.** SPWLA-2014-EEE (SPWLA Annual Symposium, Abu Dhabi, May 2014)
  - Joint paper written with Chevron describes how GEOLOG has performed characterization and evaluation of formation fluids while drilling with its advanced gas detection system. The technique provided solutions for fluid characterization, reservoir zonation, fluid contacts identification and validation of potential vertical flow barriers. It also found a positive impact in geosteering of drain holes. Additionally, the comparison with PVT sample data obtained post-mortem confirmed the reliability of GEOLOG’s advanced gas detection system as a fluid character indicator.

- **High Resolution ChemoSteering in Drilling Horizontal Wells.** SPE-164385-MS (MEOS, Bahrain, March 2013)
  - Joint paper prepared with KOC summarizing how KOC Geosteered successfully smart level-4 multilateral well with dual stacked lateral in Sandstone Reservoir with OBM utilizing GEOLOG’s advanced geochemical system. Resulted in successful placing the wells with maximum reservoir contact, isolation of potential trouble zones, optimization of nozzle sizes of the ICDs.

- **Innovative Geosteering Technology Utilized in Drilling Smart Multi-lateral Wells.** OTC-24002 (OTC, Houston, May 2013)
  - Joint paper with KOC summarizing how KOC was capable to drill successfully a horizontal well in Sandstone Reservoir with OBM utilizing GEOLOG’s advanced geochemical system. Such system enabled drilling a reservoir having vertically stacked channel sands, fault network connected to the aquifer and hydrocarbon viscosity of about 40 cP.

- **Real Time Advanced Flow Analysis for Early Kick/Loss Detection & Identification of Open Fractures.** SPE-167335 (KOGS, Kuwait, October 2013)
  - Joint paper prepared with KOC summarizing how KOC was able to drill safely an HPHT well with OBM utilizing GEOLOG’s advanced mud flowmeter. Such system ensures safe drilling by early detection of minor well kicks and mud-losses occurring in subsurface. The importance of such system becomes greater due to presence of naturally open fractures and narrow pressure margins.

- **Advanced Mud Gas Detection System Improves Formation Fluid Characterization While Drilling In Challenging Indonesia Deepwater: A Case History.** IPA12-E-014 (PA Annual Convention & Exhibition, Jakarta, May 2012)
  - GEOLOG teamed up with ENI in choosing the optimal mud gas extraction and detection system to support the evaluation of the Jangkrik reservoir fluids, in Indonesia deepwater.

- **Innovative In-house Geosteering Utilizes Gas-While-Drilling Data for Deep Jurassic High Angle Well Placement.** SPE-163368-MS (KIPCE, Kuwait, October 2012)
  - Joint paper prepared with KOC summarizing how KOC was capable to perform in house geosteering independently from directional drilling companies. Besides, this workflow successfully tested innovative use of advance gas data in conjunction with the LWD data for well placement. Indispensable in the complex short-radius drain-holes/slim well bores where conventional logging/LWD is not possible.
HSE & Quality

Health, safety, the environment and quality are fundamental to everything we do.

HSE & Quality

To respect and improve the highest safety and environmental standards whilst actively participating in the development and knowledge of the countries in which we operate.

Health, safety, the environment, and quality are fundamental to everything we do.

GEOLOG 7X7 Life Saving Rules

GEOLOG 7X7 Life Saving Rules are introduced as fundamental rules every employee has to follow. The aim of these HSE Golden rules is to enhance safety culture by providing basic guidance to carry out work in a safe manner and ensure that individuals are aware of these rules and act accordingly. Non-compliance to the rules may result in a serious injury or even death.

If you are representing GEOLOG, recognize your following responsibilities.

1. Be aware of GEOLOG 7X7 LSR
2. Always lead by an example
3. Discuss and disseminate these rules
4. Recognize at risk and positive behavior and intervene when there is an opportunity.

HSE Capabilities

Our vision at GEOLOG is to ensure we meet or exceed all health, safety and environmental (“HSE”) expectations of our stakeholders and strive to improve our HSE performance on a continuous basis.

Since 2010, GEOLOG Management System (MS) has been certified by Det Norske Veritas (DNV) Currently GEOLOG Environment Management System (EMS) is certified to ISO 14001:2015 and Health and Safety Management System to OHSAS 18001:2007 both for office/base and rig site activities. This demonstrates that GEOLOG operations are managed safely and responsibly, providing reliable services to our clients free of risks associated with HSE matters.

Executive Management is fully committed to our HSE vision and commitment and to continuously implement and improve HSE standards.

Some of the major benefits of having an integrated certified system worldwide are:

1. To provide effective and consistent operational service to our clients.
2. To provide efficient and consistent support to our rig site operations.
3. To have standardized planning and procedures worldwide, enabling GEOLOG to work consistently at the highest standards.
4. To encompass the participation of both office and rig site personnel.
5. To have an active system for continuous improvement.

Quality Capabilities

The GEOLOG Quality Management System is certified ISO 9001:2008 by Det Norske Veritas (DNV). This allows GEOLOG to integrate with its certificates in ISO 14001:2015 and OHSAS 18001:2007. This integration between the three standards helps GEOLOG to have a fully operational QHSE Management system with the objective of achieving and demonstrating excellence in QHSE performance. To ensure the QHSE Management system is in place in the certified bases, GEOLOG has a team of internal auditors in the ISO & OHSAS standards in which GEOLOG is certified.

Our Integrated management system has all been reviewed against the API Q2 standard and a comprehensive GAP analysis performed to ensure compliance.

Apart from the ISO & OHSAS certificates, GEOLOG is also registered in both Achilles and the 1st Point databases (FPAL), helping reduce the risks in its supply chain and serving as further confirmation of GEOLOG’s commitment and adherence to standards.

Satisfy customers with superior quality, value and services

Maintaining outstanding QHSE Performance that follows the ISO & OHSAS standards is a core value of GEOLOG. Our successful QHSE performance has been made possible through the leadership and teamwork of all employees and all managers. GEOLOG’s QHSE Standards are based on the continual improvement of the QHSE Management System.

Corporate Responsibility

GEOLOG is committed to advancing its policies and systems to ensure it addresses all aspects of social responsibility that are relevant to its business. For these reasons GEOLOG is not only an Active member but also a Signatory Partner of United Nations Global Compact (UNGC) - a strategic policy initiative for businesses that are committed to aligning their operations and strategies with ten universally accepted principles in the areas of human rights, labor, environment, and anti-corruption, as detailed here:

1. Businesses should support and respect the protection of internationally proclaimed human rights and make sure that they are not complicit in human rights abuses.
2. Businesses should uphold the freedom of association and the effective recognition of the right to collective bargaining. The elimination of all forms of forced and compulsory labor, the effective abolition of child labor, the elimination of discrimination in respect of employment and occupation.
3. Businesses should support a precautionary approach to environmental challenges, undertake initiatives to promote greater environmental responsibility and encourage the development and diffusion of environmentally friendly technologies.
4. Businesses should work against corruption in all its forms, including extortion and bribery.

GEOLOG publishes its annual COP (Communication on Progress) report in May of each year. The latest copy of which is available on GEOLOG’s website as well as the UNGC website.

GEOLOG supports local charitable initiatives and actively pursues projects that benefit communities around the world.

GEOLOG supports local charitable initiatives and actively pursues projects that benefit communities around the world.
Drilling in deep and ultra-deep water poses many formation evaluation challenges for operators including increased costs, remote locations, complex formation pressures which in turn may lead to borehole instability and unplanned well-control situations and drilling muds cooled by long riser sections. Use of services such as KickAlarm help mitigate non-productive time by carefully identifying only true fluid influxes and losses. The DrillClean service provides accurate assessment of the volumes of returned cuttings, identifies borehole instability and monitors hole cleaning efficiency in real-time. Our GeoPressure services help identify, monitor and analyse the presence of formation overpressures and assist in the drilling of wells with narrow safe-drilling margins. Our G5, G8, G9+ and GeoIsotopes services provide the broadest range of data analyses available to analyse the hydrocarbon composition and origin in real-time at the wellsite. This allows the optimal use of other techniques such as wireline formation testing and sampling that require specific use of extended periods of rig-time.

High Pressure and/or High Temperature

By using only surface data analysis and interpretation techniques such as G5, G8, GeoIsotopes, G9+, GeoSource and GeoRox, we are not constrained by down-hole temperature and pressure limitations of our tools and are able to evaluate data from any temperature or pressure regime. Our BitLife, DrillVibe, DrillClean and GeoPressure services are able to assist in the efficient drilling of wells in these complex environments.

GEOLOG’s services help to reduce drilling costs through the innovative use of non-invasive and therefore low risk surface measurement of drilling parameters and formation/fluid analytics, thereby improving operational safety while optimising well construction and delivery. By monitoring and analysing fluid movements our KickAlarm and GeoFracture services respectively assist in the immediate and accurate identification of losses/influxes for safe drilling, and in real-time identification and characterisation of fractures for optimising testing and completions.

GEOLOG offers a range of services that drive improved drilling efficiency in real-time, including BitLife, our patented near real-time bit condition monitoring service, and DrillVibe for immediate stick-slip detection and mitigation, both of which provide very early warning of high-risk drilling issues, and so can help prevent low ROP and potential catastrophic bit/BHA failure. In addition, DrillBest is used in designing and monitoring operating metrics against key performance indicators (KPIs) for identification of invisible lost time and non-productive time in support of continuous improvement towards technical limits.

Our DrillClean service focuses on real-time volumetric measurement of solids removal to ensure adequate borehole cleaning and early warning of borehole instability to avoid potential pack-offs. Our GeoPressure services are used in areas where moderate to severe formation pressures require careful evaluation, and we also offer standard real-time and offline well engineering including torque-and-drag, hydraulics and vibration.

Our formation evaluation suite of services such as G5, G8, GeoIsotopes, G9+, GeoSource and GeoRox provide the most detailed analysis of all aspects of the formations drilled, and their contents.

Unconventionals

Our range of services tailored to the drilling of unconventional gas and oil wells, such as GeoRox, G5 and G8, enable cost effective geosteering to allow accurate well-placement in extended horizontal and high angle wells and develop a better understanding of the geology through chemostatigraphic interpretation and correlation. Our GeoRox, GeoSource, G5, G8, G9+, and GeoFracture services identify “sweet spots” for stimulation and the composition of the hydrocarbon types present. The real time availability of these services at the wellsite means that lengthy delays waiting on laboratory turn-around are completely removed and timely decisions on how to complete wells can be made effectively and in a far more cost effective manner. By using GeoIsotopes and GeoRox we are able to provide a laboratory quality service, at the well-site to identify hydrocarbon origin and maturity and help rapidly build up a more complete understanding of the results from the wells.

Exploration

Exploration drilling comprises a whole range of challenges, the primary of which is obtaining the maximum amount of information from the well in a cost effective and safe manner. By utilising our suite of formation evaluation services, G5, G8, G9+, GeoIsotopes, GeoSource and GeoRox, we are able to acquire the maximum amount of data possible, with no risk of loss, or later availability. These services cover the entire range of likely exploration scenarios from biogenic to thermogenic gas, condensate to heavy oil, clastic, carbonate or even granitic basement reservoirs. Our drilling related services, KickAlarm, DrillClean, DrillVibe, DrillBest and BitLife will help deliver a safe and economic well.

Development

Development wells require the optimization of formation evaluation, improved drilling efficiency and the ability to identify all pay effectively. The combination of G5, G8, G9+ and GeoROX gives operators the opportunity to optimize their LWD and wireline evaluation programs effectively using surface data analyses and interpretations to help reduce costs across multiple wells and still acquire excellent formation and fluid characterization. The combination of G8 and GeoIsotopes enables hydrocarbon origin to be determined, and assist in evaluating complex reservoirs with multiple different geologic compartments. Complex structural and stratigraphic correlations are enabled by performing detailed chem stratigraphic analysis at the wellsite, ensuring that results and the geological model are understood. The DrillBest, DrillClean, DrillVibe, BitLife and KickAlarm services all enable optimal safe drilling practices.

Horizontal and Extended Reach

Our experience in horizontal and extended reach drilling in both conventional and unconventional wells has enabled GEOLOG to be a leading provider of surface logging solutions in these wells. The G5, G8, G9+, GeoIsotopes and GeoROX services help determine hydrocarbon types and origins, stratigraphic position for effective well-placement and identify geologic sweet spots and potential barriers to production along the well-path. By using a combination of surface drilling data we are able to optimize the use of more problematic LWD and Wireline services. DrillBest, BitLife and DrillClean all assist in improving drilling and hole cleaning efficiency.

Geothermal

The drilling of geothermal wells introduces a different range of challenges but, by utilising GeoFracture and GeoROX we are able to identify natural fracture patterns and characterise complex mineralogy and make stratigraphic correlations. Our KickAlarm and DrillBest services enable the implementation of performance drilling, NPT reduction and the careful monitoring of losses and micro-losses for both safety and potential reservoir identification. The measurement of hazardous non-hydrocarbon gases is performed using specific technologies for a range of gases, which may include H2S or CO.

Technology Innovation @ GEOLOG

Continuous investment in R&D

- Widespread culture of innovation at all company levels
- Continuous efforts to improve our technologies
- Significant investments in Research and Development (5% of revenue)

The continuous improvement of our technologies and our technical capabilities is a common target pursued by all at GEOLOG. Innovation is part of GEOLOG’s DNA as shown by the important results and solutions developed and achieved year after year. At GEOLOG, we believe our development is never complete and we therefore continuously strive towards the improvement of our systems, equipment and processes. We usually develop our innovations in response to our clients’ needs, working together, testing at site and analyzing results, but increasingly, we try to anticipate clients’ needs and future technological challenges, working at introducing innovative solutions independently.

Approach to Research and Development

- To develop proprietary analytical instruments
- Data integration and interpretation
- Competence and multidisciplinary innovation
- Cooperation with oil companies, technology providers and universities

The majority of the sophisticated instrumentation, used in our mobile laboratories, has been developed in house and is the result of our internal innovation and development process. We have designed, tested and commercialized our instruments to guarantee the highest reliability and accuracy associated with easy and fast maintenance.

In our daily activities we acquire a huge amount of data and our aim is to extract the maximum value from this for our clients. Data analysis, integration and accurate interpretation are the key drivers of our technological innovation process. Thanks to this activity, we are no longer merely a data provider, but as a partner able to actively support our clients in the making of key decisions in a timely and efficient manner.

Our team comprises geologists, petrophysicists, physicists, chemists, mechanical, electronic and robotic engineers from a wide variety of educational and cultural backgrounds. The complexity of our solutions requires many different competences and skills, for this reason, GEOLOG has developed a group of highly skilled professionals with different backgrounds to nurture a multidisciplinary approach.

At the same time, we are working together with clients to solve specific issues, with different technological partners particularly qualified in key technological areas and we are actively collaborating with universities by means of Masters and Doctoral theses.

Reliability and accuracy of the whole process strictly depends on quality and validation of each step.
Recent R&D Results

GEOLOG has achieved significant innovative results over its 37 year history. Some results achieved in recent years include:

- First company to run full spectrum (C1-C3) of real time isotopic analyses at well site
- First company to run thermal extraction-Gas Chromatography (G9+) at well site
- Unique company to entirely build its units operating at well site
- Technology for characterization of fractured reservoirs by using mud delta flow
- First company to deliver a near real-time drill bit-wear monitoring service
- Patent portfolio continuously increasing

Research activities have always been very prolific and effective, contributing to improve our existing services or establishing new technologies and services. The time from product inception to commercialization is very short, thanks to the collaboration with our clients, offering us the opportunity to quickly test products and compare the results against those obtained in the laboratory. Thanks to the successes achieved, GEOLOG has become a technological leader in the field of surface logging, pioneering new technologies at well site.

Innovation Focus

Our innovation is driven by the goal to support our clients with:

- Cost reduction in each phase of upstream activity
- Reducing time from discovery to first oil/gas/energy production
- Reducing risk by sharply decreasing uncertainties in all data, analyses and interpretations

We achieve this by:

- Reduction of Non-Productive and Invisible Lost Time
- Optimised Well Construction and Delivery
- Integrated Reservoir Characterization (rock + fluids)
- Contaminant Gas origin and distribution in reservoir
- Safety, Health and Environmental protection
Manufacturing and R&D
Reliability, performance and quality delivered through our unique production line

GEOLOG prides itself on manufacturing all of its oilfield services equipment and mobile laboratories at its production facility in Milan. By taking ownership of the entire manufacturing process in-house, GEOLOG is the only global surface logging supplier to provide the complete surface logging process to its clients from design of equipment through to interpreting the results of service provision. From design to physical assembly, full control and accountability is maintained for the quality and the highest standards being implemented for all cabins, computing hardware, gas acquisition and detection equipment, advanced geochemical analytical tools and specialist drilling technologies. By providing hardware of the highest possible standard, our field engineers and crews are able to focus on performing their services. Comprehensive training is also provided in the field and for our crews to be able to maintain their focus on providing an exemplary service, acquiring, analysing and interpreting results and equipment.

Complete control over the entire manufacturing process sets GEOLOG equipment apart, in terms of quality of material, performance, reliability and traceability. Designs are modular, with acquisition and analytical components being suitable for all mobile laboratories. Through this process, GEOLOG is able to offer standard and optional extended warranties for its equipment, supported by a global 24/7 network of technical support from its production and operations teams. GEOLOG has in place a dedicated network of operational support bases with qualified, competent resources to provide local technical assistance. It is through this network and with assistance from our Milan Manufacturing Centre that we are also able to provide thorough installation and commissioning of all of our products and services and guarantee the availability of spare parts and upgrades to avoid obsolescence. Frequent and regular refurbishment and upgrading occurs to ensure continued reliability of being towed easily between locations.

Our manufacturing and design teams are able to provide detailed drawings, plans and certification to a variety of standards, addressing all customer concerns about the specifications of our units. Our mobile laboratories can be built according to various international standards, summarised in the following table:

- **Available Unit Lengths**: 20 ft, 25 ft, 30 ft and 40 ft. Custom length on request
- **Offshore Container Certification**: DNV 2.7-1 (Det Norske Veritas)
- **Offshore Electrical Certification**: DNV 2.7-2 (Det Norske Veritas)
- **Thermal Protection Certification**: SOLAS A0 (0 mins) and A60 (60 mins) for Zone 1 - (Safety of Life at Sea)
- **Helicopter Transportation Certification**: NATO-STANAG 3542
- **Norwegian Petroleum Industry Certification**: NORSOK Z-015 (Norsk Sikkets Konkurranseposisjon)
- **Winterized Unit**: A0 and A60 down to – 20 °C (– 4 °F)
- **Winterized Alaska Model Unit**: A0 down to – 50 °C (– 58 °F)
- **Combo Unit**: A0 and A60 for Zone 1 (LWD, MWD)

As a global oilfield services provider, we have extensive experience in developing, building and using equipment in harsh high temperature and extremely low temperature environments. We offer “winterized” components and systems proven to operate consistently in temperatures below –20 degrees C. In hot climates we provide dual air-conditioning units to ensure redundancy. Our full range of equipment and services have been tried and tested in temperatures up to 50 degrees C. We are also able to provide a range of specialty service cabins, including “Advanced Service” cabins designed to be used alongside other surface logging companies providing only standard services (deployed for example in Brazil for Petrobras, in Senegal for Caim Energy and in Tanzania for Statoil) and special databases provided to accommodate GEOLOG’s services and third party services such as Logging While Drilling (LWD), or Measurement While Drilling (MWD) services in one cabin). For certain land operations, GEOLOG has trailer mounted units, capable of being towed easily between locations.

In addition to our various service provision cabins, GEOLOG also provides suitable certified small toolbox/support containers, commonly used in more remote environments to house additional spares, tools and consumables to ensure continued, uninterrupted service no matter where operations may be occurring.

GEOLOG Surface Logging Equipment Characteristics:

- All equipment manufactured in our Milan facility
- Fully certified equipment by Det Norske Veritas (DNV)
- Customized equipment according to customer/project needs
- Equipment quality independent of 3rd party suppliers
- Fully modular and upgradeable Surface Logging Unit & Equipment
- Efficient and fast implementation of upgrades

With our equipment GEOLOG:

- Guarantees the availability of spare parts
- Offers Global Support 24/7
- Provides commissioning and start-up
- Provides a wide network of locations with support personnel and equipment
- Provides manuals, drawings, certification and other critical production information
